HTrace: Ambient Occlusion V2

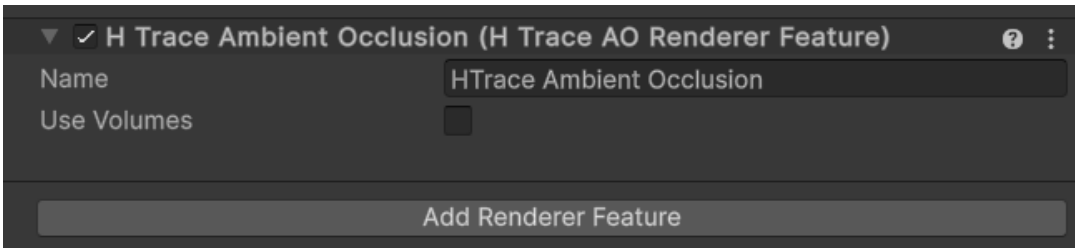

Quick-start manual

This is a short manual that helps you to get started with HTrace: Ambient Occlusion V2. If you have any questions, bug reports or suggestions - feel free to reach out to us via Discord.

You can find full documentation here: Online Documentation
And a more in-depth setup guidance here: Setup and Best Practices

Adding HTrace AO to Your Scene [URP] :

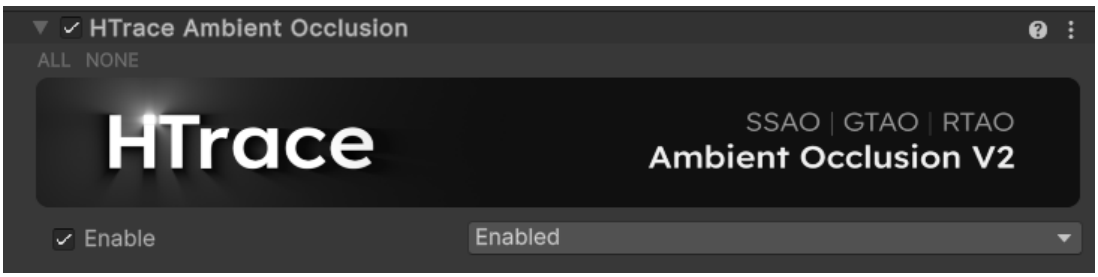

1. (a) Go to **URP Render Data** and in the **Renderer Features** section add **HTrace AO Renderer Feature**:

1. (b) Alternatively, this can be done via **Window → HTrace → Add HTrace AO Renderer Feature to active RenderData** button.

2. If you prefer to use the **Volume** workflow and control AO settings through a volume override, enable the **Use Volumes** option in the **Renderer Feature**. Otherwise, disable this option to control AO settings through a script attached to a **GameObject**.

3. (a) If you selected the **Volume** workflow in the previous step**,** go to your scene **Volume** and add HTrace AO override via **Add Override → Lighting → HTrace: Ambient Occlusion**:

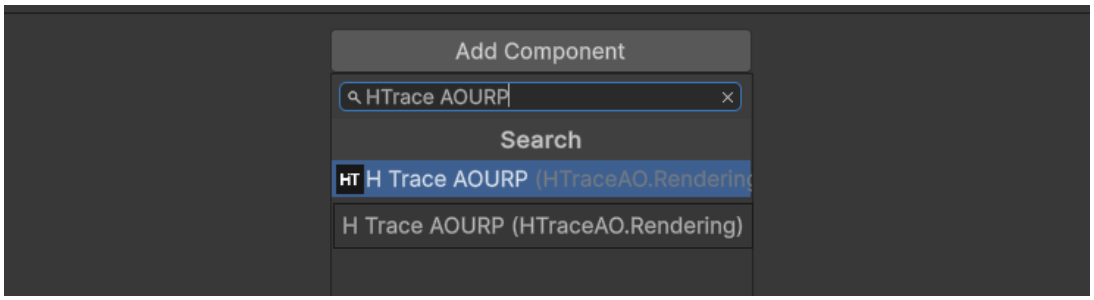

Alternatively, you can tweak HTrace AO settings globally through the **Project Settings → Graphics → URP → HTrace: Ambient Occlusion**

3. (b) If you selected the **GameObject** workflow in the previous step**,** Right click to open a dropdown menu and find the **Rendering** category. Then select **HTrace Ambient Occlusion:**

Alternatively, you can add **HTrace AO script** to any empty game object manually:

Adding HTrace AO to Your Scene [HDRP] :

1. (a) Right click to open a dropdown menu and find the **Rendering** category. Then select **HTrace Ambient Occlusion:**

1. (b) Alternatively, you can add **HTrace AO script** to any empty game object:
